Changing Text

After accessing the Content Editing screen using the "Edit" tab:

#1. Enter your text into the form fields. The editor provides a range of features depending on the intention of the form. Place the mouse point above the button and wait "Mouse Over" for a description of what each button does.

#2 Body text can be copied from office documents. However for consistency very little formatting is usualy best. If you find yourself trying to clean up content pasted from an office document, copy the content into a text editor (e.g. notepad) first to remove any unwanted formatting.

#3. Push save. Unless you push save, your changes won't be kept on the system.

You will be returned to your newly updated version of the page.

Alpine Grazing

Tags

Enter a comma-separated list of words to describe your content.

Body (Edit summary)

Since European settlement, grazing by livestock has caused an unacceptable level of damage to Australia's sub-alpine to alpine zone, with implications for water quality, soil erosion, weeds, biodiversity and nature conservation. The results of long-term studies since the 1940s have shown unequivocally that alpine grazing is an inappropriate land management practice, particularly in the Alps National Parks and Tasmania's Central Plateau. The Ecological Society of Australia urges all levels of government to ensure that the ban on livestock grazing in alpine parks is maintained
